

Thinking & Creating with Line...
can help lay a foundation for learning across disciplines.

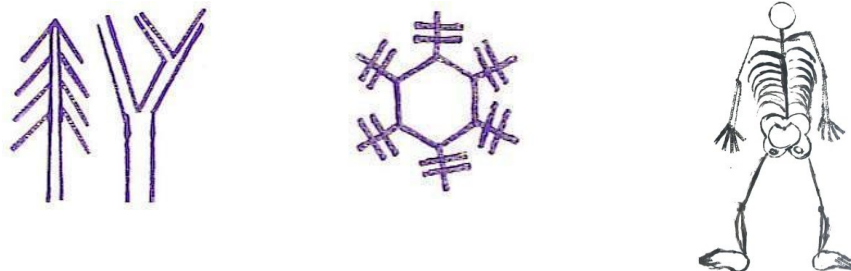

Look for vertical, horizontal and diagonal lines to discover how shapes, letters, and designs are constructed. Use lines to construct shapes, letters, patterns, and designs.

Look for line structure in the built environment. Use lines and shapes to construct buildings, learn about architecture, and invent simple machines.

Look for lines in nature to explore how living structures move and grow. Use lines to create designs based on patterns in nature.

Perceiving, thinking and forming are steps to constructing knowledge and making sense of the world.
